No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NEDO human cDNA sequencing project supported by Ministry of
Bconomy, Trade and Industry of Japan; cDNA full insert sequencing:
Research Association for Biotechnology (RAB); cDNA library
construction: Helix Research Institute (HRI) (supported by Japan
Key Technology Center etc.); 5- & 3-end one pass sequencing: RAB,
HRI, and Biotechnology Center, National Institute of Technology and
Evaluation; clone selection for full insert sequencing: HRI and
RAB; annotation: HRI and RAB.
RAB; annotation: HRI and RAB.

Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: vega@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
Clon Jun 17, 2002 this sequence version replaced gi:20218554.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Dem:, EMB.; Sw., SWISSPROT; Tr.; TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group, Further information can be found at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Group.                                                                                                                                                                                                                                                                                              * NOTE: This is a 'working draft' sequence. It currently consists of 7 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as "runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

SOURCE Musculus (house mouse)		opkins, B. irect Submi ubmitted (C	Cambringsenite, Call 1554, OK. Befail and states: humquerydgenite, cac.uk Clone requests: clonerequestosac.uk COMMENT On Feb 4, 2003 this sequence version replaced gi:22474404.	Center: Metacode: SC Web site: http://www.sanger.ac.uk Contact: humquery@sanger.ac.uk	During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission annotation the may not be found in the sequence submission.	corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.  The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:	Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.aanger.ac.uk/Projects/C elegans/wormpep This sequence	was integer as londows unless conservate notes: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as attempt and proper and problems, such as a sequence of the problems.	compressions and repeats; and regions were covered by at least one plasmid subclone or more than one MI3 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.	<pre>RP23-13/122 IS Irom the RPC1-23 Mouse BAC Library constructed by the group of Pieter de Jong. FOr further details see http://www.chori.org/bacpac/home.htm VECTOR: pBACe3.6</pre>	Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to confirm this sequence. Submitted (199-NOV-2002) Human Gencem Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA ON Nov 9, 2002 this sequence version replaced gi:22772470.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bom.tuc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ms to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a "working draft' sequence. It currently

* Consists of 3 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence.

Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence conly contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          * NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a "working draft' sequence. It currently

* CONSIS: This is a "working draft' sequence. It currently

* consists of 1 contigs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* the accession number will be preserved.

(http://www.hgsc.bcm.tmc.edu/projects/rat/). Bach contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence conly contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 ATGCCCCGCCCTGGACACCCCCGCCCAGCATCTGGGCCTCCACGCTTGGGACCGTGGGAG 60

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ΰ rin New isolated nucleic acid molecule, useful for treating breast cancer, and diagnosing or monitoring the presence of metastases of breast cancer in a patient.

Claim 1; Page 250-251; 377pp; English.

comprising: a sequence encoding a sequence comprising 11-1518 amino acids ; a sequence comprising 190-8144 bp; or a sequence that selectively hybridises to, or having at least 60% identity with the 11-1518 amino acid or 190-8144 nt sequence. The polypeptic and the nucleic acid are useful for treating breast cancer, and diagnosing or monitoring the presence of metastases of breast cancer in a patient. The polynucleotides The invention relates to a novel isolated nucleic acid molecule

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes human nucleic acid-associated proteins designated NAAP-1 to NAAP-57. The human NAAPs have cytostatic, antiatreriosclerotic, antiathly, antiallergic, cerebroprotective, antiparkinsonian, anticonvulsant, nootropic, neuroprotective, antiparkinsonian, anticonvulsant, thyromimetic, antiarthritic, antiparketrial, virucide, protocoacide, antiparsatitic and tengicide activities and can be used in diagnosing, treating and polymucleotide sequences can be used in diagnosing, treating and preventing diseases or conditions associated with the decreased expression or overexpression of NAAP, such as cell proliferative diseases (e.g. cancer, atherosclerosis, hepatitis), neurological disorders (e.g. cancer, atherosclerosis, hepatitis), neurological disorders (e.g. cancer, atherosclerosis, hepatitis), neurological disorders (e.g. cancer, atherosclerosis, hepatitis), autoimmunef,inflammatory disorders (ADS, allergies, hypothyroidism), autoimmunef,inflammatory disorders (ADS, allergies, atopic dermatitis, arthritis) and infections (e.g. bacterial, viral, viral, atterior, and processed of the process

The invention discloses a polynucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel polypeptides. Also claimed is a polypeptide encoded by the polynucleotide or its partial peptide, an antibody binding to the polypeptide or peptide or its partial peptide, immunologically assaying the polypeptide or peptide of the polynucleotide, immunologically assaying the polypeptide or peptide of the polynucleotide by contexting the polypeptide or peptide with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polypucleotide in an expressible manner and an antisense polynucleotide. The oligonucleotide is useful as a primer for synthesishing the polynucleotide, or as a probe or proteins are useful as pharmaceutical agents and manocaded concept of proteins are useful as pharmaceutical agents and many disease-related proteins are useful as pharmaceutical agents and many disease-related concept encoded proteins. The polynucleotide and encoded concept encoding them can be used as indicators for diseases (e.g. osteoporosis, transcription-related proteins, disease-related proteins and genes are involved in tissue and/or cell concoding them can be used as indicators for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a cDNA of the invention. Note: Some of the sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               420

The invention describes an isolated human nucleic acid (I) encoding any of 120 10-1533 residue amino acid sequences (S1), given in the specification, comprising any of 164 179-12421 base pair sequences (S2), given in the specification. The methods and compositions of the present invention are useful for identifying, diagnosting, monitoring, staging, imaging and treating lung cancer and non-cancerous diseases of the lung. They are also used for identifying lung tissue, monitoring and identifying and/or designing antagonists so of the polypeptide of the invention, gene therapy, production of transgenic animals and production of engineered lung tissue for treatment and research. 8 ద 8 셤 à 셤 ò 셤 ò 셤 ठे The invention describes a new isolated polymucleotide (I) encoding a polypeptide with biological activity comprising: a nucleotide sequence of SEQ INUIY defined); a nucleotide sequence that hybridizes to the sequence of (i) under stringent hybridization conditions; or a nucleotide sequence of (i). Also described are: a(n) (expression) vector comprising (I); a host cell genetically engineered to comprise (I) operatively, associated with a regulatory sequence that modulates expression of the polymucleotide in the host cell; an isolated polypeptide comprising a sequence of SEQ ID NOS: 568-1134 (fully defined), where the polypeptide of sequence of SEQ ID NOS: 568-1134 (fully defined), where the polypeptide of (3) and a sequence of SEQ ID NOS: 1-567; a composition comprising the polypeptide of (3) and a carrier; an antibody directed against the polypeptide of (3); a method of carrier; an antibody directed against the polypeptide of (3); and a carrier; an antibody directed against the polypeptide of (3); and a collypeptide of (3); and a collypeptide of (3); a method for identifying a compound that binds to the polypeptide of (3); and a collypeptide of (3); an exthod of producing the polypeptide of (3); and a collypeptide of SEQ ID NOS: 1-567 encoding a polypeptide of (3); and a collypeptide of (3); and a collypeptide of (3); and a collypeptide of of polymucleotides, where the collection of sequences and methods are useful in diagnostics, forensic, and gene mapping, in identifying of mutations responsible for genetic disorders or cher traits, in assessing biodiversity, and for producing many other types of data and products dependent on DNA and anino acid sequences. The composition and method are useful for treating a disease, burns, CNA and porture and products dependent on DNA and anino acid sequence. This sequence of caucoimmune disease, Alzheimer's disease, Parkinson's disease, parkingon's caucoimmune diseas 60 1 ATGCCCCGCCCTGGACACCCCCCGCCCAGCATCTGGGCCTCCACGCTTGGGACCGTGGGAG Gaps 5 Length 791; Sequence 791 BP; 149 A; 278 C; 222 G; 142 T; 0 U; 0 Other; Indels Score 763; DB 14; Pred. The present invention describes a library of human polynucleotides comprising the sequences given in AAZ12532 to AAZ1779. Also described is comprising the sequences given in AAZ12532 to AAZ1779. Also described is a method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell. comprising detecting at least one differentially expressed gene product in a test sample from a cell consecred of being cancerous, where the gene product is encoded by one of the polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensice, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two calls (e.g. to identify abnormal) or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer). The polynucleotides of the invention are especially used in the diagnostis, prognosis and management of colorects, present cancer, and management of colorects cancer, and management of colorects cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   881

                                   The invention describes an isolated human nucleic acid (I) encoding any of 120 10-1533 residue amino acid sequences (S1), given in the specification, comprising any of 164 179-1421 base pair sequences (S2), given in the specification. The methods and compositions of the present invention are useful for identifying, diagnosing, monitoring, staging, invention are useful for identifying uniq cancer and non-cancerous diseases of the lung. They are also used for identifying lung tissue, monitoring and identifying and/or designing antagonists of the polypeptide of the invention, gene therapy, production of transgenic animals and production of engineered lung tissue for treatment and research. This sequence encodes a lung specific nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

comprising: a sequence encoding a sequence comprising 11-1518 amino acids in a sequence comprising 190-8144 bp; or a sequence that selectively hybridises to, or having at least 60% identity with the 11-1518 amino acid or 199-8144 at sequence. The polypeptide and the nucleic acid are useful for treating breast cancer, and diagnosing or monitoring the presence of metastases of breast cancer in a patient. The polymucleotides of the invention can be used to treat disorders by gene therapy. This polymucleotide represents a breast specific related sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1436 GGTCTTCAGGTGGCCTGATCATGGAAAGTAAGGAGTTAGGCATTACCTTCTGGGAGTGAA 1495

The present sequence is one of 3351 sequences in a library of human polymucleotides. The library is used to detect differentially expressed genes correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polymucleotides me probes can be used for chromosome mapping of the polymucleotides of detection of transcription levels. Ribbzymes or antisense oligonucleotides can be generated. The polymucleotides and can be generated. The polymucleotides and blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and antibodies against them can be used in pharmaceutical compositions to treat the cancers and prollferative disorders such as neoplasia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            80 ATGCCCCGCCCTGGACACCCCCGCCCAGCATCTGGGCCTCCACGCTTGGGACCGTGGGAG 139

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is one of 3351 sequences in a library of human polynucleotides. The library is used to detect differentially expressed dense correlated with a cancerous state of a mammalian cell and can detect colon, prostate, breast and lung cancer. The library can be used to produce probes for detection of mRNA and to produce additional copies of the polynucleotides. The probes can be used for chromosome mapping of the polynucleotide and for detection of transcription levels. Ribozymes or antisense oligonucleotides can be generated. The polynucleotides and their gene products are used as genetic or biochemical markers (e.g. in blood or tissues) that will detect the earliest changes along the carcinogenesis pathway and/or monitor the efficacy of therapies and preventive interventions. The polynucleotides, polypeptides and antibodies against them can be used in pharmaceutical compositions to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             865 GATGAGCAGGATGCTGAGGGCCGCCTGGTACGCGCCATCATTCGCATTAGTACCCGAAAG 924

                                                                                         The present invention describes a library of human polynucleotides comprising the sequences given in AA212532 to AA217779. Also described is a method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell suspected of being cancerous, where the gene product is encoded by one of the 5248 polynucleotide sequences given in AAZ12532 to AAZ17779. polynucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer). The polynucleotides of the invention are especially used in the diagnosis and management of colorectal cancer, breast cancer, peptide analogues and antagonists
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9

This invention describes novel isolated human polymucleotides obtained by screening for differential expression in colon cancer, breast cancer and lung cancer call lines. The polymucleotides of the invention are represented in AAX98275-X991B and encode polypeptides of protein families selected from 4 transmembrane segments integral membrane proteins, 7 transmembrane receptors, ATPases associated with various cellular activities (AAA), eukaryotic aspartyl proteases, GATA family of transcription factors, G-protein alpha subunit, phorbolesters or diacylglycerol binding proteins, protein kinase, protein phosphatase 2C, cranscription factors, G-protein tyrosin, wut family of developmental signalling proteins and WM/rap5/WWW domain containing proteins. The corocated polypeptides also have a functional domain selected from Ank crepeat, basic region plus leucine zipper transcription factors, crepeat, cancers, mainlies and are predicted to have similar properties. The novel corocations in particular, the products for use as therapeutic agents and in forensics, genetic analysis, mapping and diagnostic applications. In particular, the product can be used for treating e.g. cervical cancers, melanomas, colorectal adenocarcinomas, wilm's tumour, sarcomas, retinoblastoma, myosarcomas, lung carcinomas, leukemia, and lymphomas such as histiocytic leukemia, and management of cancers. They can be used for treating e.g. cervical myelogenous leukemia, promyelocytic leukemia, monocytic leukemia, and lymphomas such as histiocytic leukemia, and hyperplasia, congenital alveolar dysplasia, and hyperplasias, e.g. endometrial, adrenal, breast, beast, be Escobedo J, Innis MA, Garcia PD, Sudduth-Klinger J; Standazzo F, Kennedy GC, Pot D, Kassam A; Hanac R, Crkvenjakov R, Dickson M, Drmanac S, Labat I; Kita D, Garcia V, Jones LW, Stache-Crain B; New isolated human polynucleotides.
